

Positioning – a literature review

Natasha Saqib

Department of Management Studies, University of Kashmir, Srinagar, India

Positioning – a
literature
review

Abstract

Purpose – The purpose of this paper is to review state-of-the-art literature on product/brand positioning to re-examine the positioning concept and developing a more comprehensive definition from a theoretical viewpoint.

Design/methodology/approach – A systematic review of positioning was conducted. The review conformed to a rigorous set of core principles: it was systematic (organized according to a method designed to address the review questions), transparent (explicitly stated), reproducible and updatable and synthesized (summarized the evidence relating to the review question).

Findings – The literature review reveals that there is lack of coherent definition for positioning, and there is no mutual agreement among marketing scholars and practitioners about the exact meaning of the concept. Therefore, comprehensive definition of positioning encompassing the five underlying positioning perspectives (competition; empty slot/mind; consumers' perception, differentiation and competitive advantage) is suggested.

Research limitations/implications – This paper will be useful for academicians to analyze the current nature of academic research in this area and will provide an added advantage to managers to design and implement positioning strategies for their product/brands that will allow their organizations to gain competitive advantage. This study acknowledges limitations with respect to its exclusive search criteria, which might affect its generalizability.

Social implications – Position and positioning is of relevance in society in broad terms, e.g. in sports, politics and culture. Positioning strategy is discussed and implemented in different industries (business-to-business and consumer), for all kinds of brands (including, for instance, corporate brands) and for "brands" in the very widest sense (such as places or people).

Originality/value – This is the first systematic review of positioning that provides a detailed understanding of the current state of positioning research on a single platform and also draws a comprehensive positioning conceptualization.

1. Introduction

Positioning has received much attention over the past decade and has emerged as a highly influential marketing management paradigm. It is generally accepted that theoretically, practically and strategically positioning has become one of the key components in modern marketing management, both from the academic point of view (Aaker and Shansby, 1982; Arnott, 1992, 1994; Blankson and Kalafatis, 2004; Boatswain, 2015; Crawford *et al.*, 1983; Day *et al.*, 1990; Diwan and Bodla, 2011; Fuchs and Diamantopoulos, 2012; Hooley *et al.*, 2012; Kapferer, 2012; Kotler, 2003; Porter, 1996; Sengupta, 2005; Soundararaj and Rengamani, 2002; Urde and Koch, 2014; Wind, 1982) and from the practical or business point

of view (Ogilvy, 1983; Ries and Trout, 1981; Trout and Rivkin, 1996). The importance of positioning is emphasized by various authors (Aaker and Shansby, 1982; Arnott, 1992; Blankson and Kalafatis, 2004; Boatwain, 2015; Diwan and Bodla, 2011; Sengupta, 2005) who note that positioning decisions determine the direction of a firm's overall marketing strategy and that an effective marketing mix can only be developed once a company has crafted a distinct positioning strategy. By making the wrong positioning decision, a company could develop a misguided marketing mix and thus go down an undesirable path.

Moreover, because of its inevitable effect on profitability and long-term success of the firm it has been applied to consumer products (Boatwain, 2015; Crawford, 1985; Diwan and Bodla, 2011; Fuchs and Diamantopoulos, 2010), industrial products (Simkin *et al.*, 1985; Iyer *et al.*, 2018; Jalkala and Keranen, 2014; Pandaa *et al.*, 2018), financial services (Burton and Easingwood, 2006; Easingwood and Mahajan, 1989; Kim and Mauborgne, 2000; Shostack, 1987), retail services (Abril *et al.*, 2009; Auken and Lonial, 1991; Corstjens and Doyle, 1989; Holmes, 1974) and tourism services (Botha *et al.*, 1999; Gartner, 1989; Javalgi *et al.*, 1995; Pike and Page, 2014). Thus, the wide use of the positioning concept underlines its importance, usefulness and applicability.

The literature is full of statements emphasizing the importance of positioning. Aaker and Shansby (1982) claim that product positioning is so central and critical that it should be considered at the level of a mission statement. Dovel (1990) considers positioning as the essence of a business and backbone of a business plan. While Johansson and Thorelli (1985), Keller (2009), Perreault and McCarthy (1996), Wilson and Fenwick (1978) and Wind (1980) believe that product positioning is the foundation of the firms marketing strategy. More specifically, Maggard (1976) points out that positioning can make a real contribution as a conceptual vehicle through which various marketing concepts (market segmentation, product differentiation, consumer preference, target market and the like) might be synchronized more effectively. Crawford (1985) believes that positioning is meant to drive the entire marketing programme of the organization and sees positioning as an ingredient of total strategy, not just an advertising ploy, product, brand, price, promotion and distribution must all be consistent with the positioning statement. Richarme (2007) argues that marketers should adopt positioning as their fifth "P" and use it in conjunction with the other four "Ps". To a large degree, it is a higher-order "P" that rides on the base of the other four "Ps" and at the same time serves as a bridge to corporate strategy.

Ries and Trout (1986) acknowledge positioning to be the tool of competitive warfare. It helps customers to know the real differences among competing products (DiMingo, 1988) and helps in creating a distinctive image of the brand in consumers' minds (Wells and Prensky, 1996) or brand value by shaping of customers perceptions (Park *et al.*, 1986; Devlin *et al.*, 1995). Schouten and McAlexander (1989) contend that a key benefit of a successful positioning strategy is the partial insulation it gives from the competitive pressures of other firm. Therefore, positioning is an important source of competitive advantage (Cronshaw *et al.*, 1990; Gwin and Gwin, 2003; Sengupta, 2005).

In today's over-communicated and product-saturated consumer world, effective positioning is critical to brand success (Marsden, 2002). There is a positive relationship between the positioning related decision and the brand success that is the success of brand moves around the pivot of positioning decision (Fuchs and Diamantopoulos, 2010; Pham and Muthukrishnan, 2002; Punj and Moon, 2002). This not true for only a new brand, it is also of relevance for existing brands when enlarging one's own market potential or when differentiating a brand from its competitors by repositioning (Trommsdorf, 2002). Therefore, branding and positioning are interrelated and positioning is also the cornerstone of brand management (Blankson and Kalafatis, 2007; de Chernatony, 2009; Esch, 2010).

Several authors (Brooksbank, 1994; Day *et al.*, 1990; Fisher, 1991; Mazanec, 1995; Porter, 1996; Urban and Hauser, 1993) are of the view that long-term success of companies and their products depend on how well they are positioned in the marketplace. Positioning has an impact on important consumer-based outcome variables such as higher consumer loyalty, higher brand equity and value (Hartmann *et al.*, 2005; Kalra and Goodstein, 1998; Knox, 2004), less customer vulnerability (Romaniuk, 2001), positively shaped preferences and beliefs about brand value, greater willingness to search for the brand (Schiffman and Kanuk, 2007; Trommsdorf and Paulssen, 2005; DiMingo, 1988), perceived price sensitivity (Kalra and Goodstein, 1998), brand affect (Jewell, 2007) and brand salience and recall (Alba and Chattopadhyay, 1986).

In addition to non-financial customer-centred indicators, literature has examined positioning effectiveness in terms of financial performance indicators. Cravens and Piercy (2009) claim that effective positioning of the firm's products is essential in gaining and sustaining superior performance. More specifically, several authors (Blankson *et al.*, 2008; Blankson and Crawford, 2012; Brooksbank, 1994; Clement and Werner-Grotemeyer, 1990; Day *et al.*, 1990; Devlin *et al.*, 1995; Ennew and Mirza, 1995; Fisher, 1991; Kalafatis *et al.*, 2000; Kalra and Goodstein, 1998; Lee and Liao, 2009; Suzuki, 2000) claim that positioning has an impact on the financial performance of a company. Hence, the most important decision firm will ever make about its product is how it should position its product.

This article presents an exhaustive examination of research on positioning, particularly research that addresses the problem of conceptualizing and defining positioning. The basis of the article is a literature review of positioning research published in academic journals between 1969 and 2017. These articles range across such disciplines as marketing, strategic marketing and management. The study uses network analysis and text mining to identify how research defines positioning and discusses how the definitions of positioning have been developed on different perspectives.

2. Concept of positioning

The concept of positioning can be traced back to the 1960s when positioning was popularized in consumer product marketing by pioneers such as Alpert and Gatty (1969) they identified positioning as the differentiation of brands according to consumer perceptions they studied differences in consumers perceptions of the organizations products brands when these were positioned differently using technology as the differentiating dimension over similar products in the market place. However, contemporary writers on the subject of positioning (Hooley *et al.*, 1998; Kotler, 2003; Blankson and Kalafatis, 2004) sustain Ries and Trout were among the first to define positioning and its origins lie in their article "Positioning is a game people play in today's me-too market place" published in the *Industrial Marketing* journal in 1969. In their seminal article, they defined positioning as "as a strategy for 'staking out turf' or 'filling a slot' in the mind of target customers". They then made the concept popular by publishing a series of articles in *Advertising Age* in 1972. "The Positioning Era Cometh", a three-part article series published in *Advertising Age* magazine. The groundbreaking series illustrated perceptual positioning related to the concept of positioning and triggered a profound paradigm shift in how people viewed advertising and marketing and how firms advertised their products. Back in 1982, Ries and Trout published their book, *Positioning: The Battle for Your Mind*, which placed an entirely different spin on the concept. Ries and Trout (1986), however, consider "Positioning within the context of perceiving the product, merchandise, a service, a company, an institution, or even a person". They noted that positioning is not what is done to the product/service, but rather what is done to the mind of the customer/consumer. According to the authors, the key issue is to

position the offering in the mind of the consumer/customer such that positioning shifts the importance of marketing from the product to the battle for your mind. They further stated that the basic approach of positioning is not to create something new and different, but to manipulate what's already up there in the mind, to retie the connections that already exist.

2.1 Issues in positioning research

Although there is a vast amount of literature on positioning, and this inquisitive verb is in great favour among marketing experts, it is one of the most convoluted concept and is still subject to incomprehension. The concept of positioning is subject to considerable differences in interpretation (Maggard, 1976). It is perhaps one of the thorniest and most complex concepts in marketing (Bhat and Reddy, 1998). One of the reasons for this circumstance is the issue that there is no mutual agreement among marketing scholars and practitioners about the exact meaning of the concept. It is, however, important to note that the lack of coherent definitions (Arnott, 1992; Blankson and Kalafatis, 2004; Crosier, 1981; DiMingo, 1988; Holmes, 1973; Maggard, 1976 and Smith and Lusch, 1976) and the difficulties involved in the implementation of the positioning process by practitioners (de Chernatony, 1994) has invariably given rise to comments about the lack of appreciation of the positioning concept (Pollay, 1985). Such dilemma was first expressed in the writings of Aaker and Shansby (1982) who stated that: "positioning means different things to different people". To some, it means the segmentation decision. To others it is an image question. To still others it means selecting which product features to emphasize, and it still holds true today. The foregoing is summarized by Bainsfair (1990) who states that positioning is one of those words which everybody uses but few people understand. According to Rigger (1995), the absence of a rigorous definition is inhibiting both practitioner and academic scholars in developing appropriate means of measuring the operationalization of positioning. Blankson and Kalafatis (2004) highlighted that there has been no single universally accepted definition of the concept of positioning. Specifically, the boundaries of the concept are often not clearly defined – the question what exactly falls under the scope of positioning has not been sufficiently answered in literature and is still subject to heavy debate in the marketing community. This state of affairs has given rise to several varying terms associated with the concept, i.e. positioning, position, product positioning, market positioning, etc., but as stated by Arnott (1994), the various terminologies are simply "several sides of the same coin" and complement each other. Further according to Smith and Lusch (1976), product position and brand position are different in scope; product position refers to the objective attributes in relation to other products and brand position refers to subjective attributes in relation to competing brands and this perceived image of the brand does not belong to the product but is the property of consumers perceptions of a brand. However, in broader terms, the terms product positioning and brand positioning usually mean the same thing (Kazmi, 2007).

Urde and Koch (2014) in their review of positioning also claim that there is surprising vagueness of the concept, the lack of the holistic view and the dominance of the market oriented approach. According to Fuchs (2008), positioning is an important, rich and a difficult area for future research. Marketers have developed an impressive variety of highly valuable research techniques and models in positioning research. However, on the conceptual and empirical front, research on positioning is scarce and lagging behind. Chew (2005) also claims that there are little theoretical/conceptual frameworks to guide positioning research and also, the extant positioning literature is largely normative and the issues discussed tend to be subjective. Nevertheless, more research is needed to obtain a better general understanding of the positioning concept. In the following section, the present

review and analysis of definitions of positioning used in articles from 1969 to 2017 are presented.

3. Research method

This study used a systematic literature review to identify articles that define or conceptualize the concept of positioning. Systematic review has its origins in the medical field and has been developed through the Cochrane Collaboration. Some of the features of this approach have been adopted in the social sciences. More recently, the approach has been closely scrutinized to determine its appropriateness in the management field and conclusions indicate that “for practitioners/managers, systematic review helps develop a reliable knowledge base by accumulating knowledge from a range of studies (Brown and Oplatka, 2006).

A systematic literature review is neither a formal full-length literature review nor a meta-analysis, as it conforms to a rigorous set of core principles. It has to be systematic (organized according to a method designed to address the review questions), transparent (explicitly stated), reproducible and updatable and synthesized (summarizes the evidence relating to the review question) (Briner and Denyer, 2012). In other words, it is an essential tool for an evidence-based practice (Briner and Denyer, 2012) that differs from traditional narrative reviews by adopting a replicable, scientific and transparent process (Tranfield *et al.*, 2003). In line with MacInnis’s (2011) framework for conceptual contributions in marketing, our analysis involves identifying how entities (definitions) are different by revealing the underlying key perspectives in various positioning definitions. The present study examines not only how these definitions are different but also what they have in common.

3.1 Search strategy

The review identified relevant articles, which enabled a transparent, documented research process with criteria for including and excluding articles. The systematic review involved the following steps: State research questions develop guidelines for collecting literature, decide on inclusion and exclusion criteria, develop a comprehensive search plan for finding literature, develop a codebook for classifying and describing literature, code the literature and synthesize the literature (Tranfield *et al.*, 2003; Witell *et al.*, 2016). The present study explores the various ways in which positioning has been defined in the literature to determine whether these definitions are different and also what they have in common.

The main search strategy identified research articles that defined the concept of positioning. To capture this, inclusion and exclusion criteria were developed. The initial inclusion criteria were broad to ensure that all relevant articles were identified, were peer-reviewed empirical or conceptual articles, were published in English and had the definition of positioning. To achieve the mentioned objective, five dominant academic databases including Scopus, Emerald, EBSCOS, Wiley Online Library and Science Direct were explored to identify articles on positioning. This paper reviews literature spanning from 1969 to 2017. Articles were identified in the “article title, abstract, and keywords” section of the said databases using keywords as “positioning”; “product positioning”; and “brand positioning”. To keep the search process specific to the objectives of this study, above keywords were used with the subject limits of “Business, management and accounting”; “Social Sciences”; and “Psychology”.

3.2 Sample selection

The initial search yielded 1,557 empirical or conceptual articles, 1,502 of which were in English. Figure 1 provides an overview of the selection process

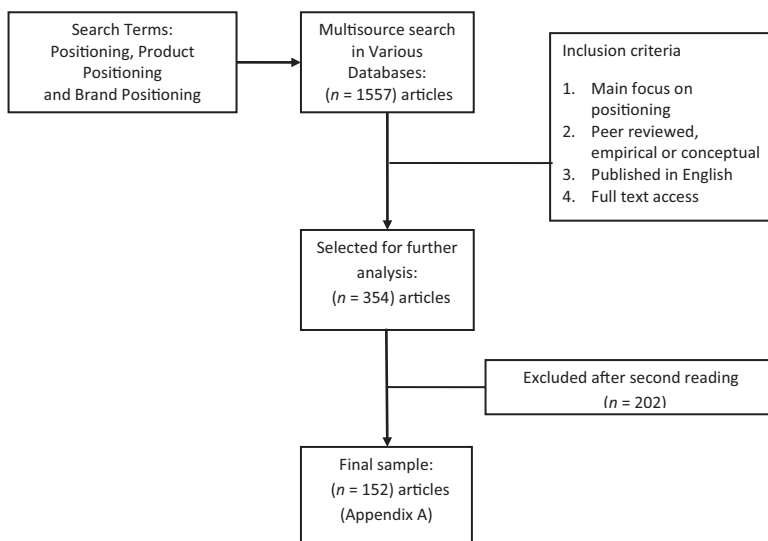

Figure 1.
Flow diagram of
article selection
process

All articles were scanned for relevance, which revealed two clear trends. First, although many of the articles used the term “positioning” in the abstract, few actually defined, conceptualized, or emphasized the term. Second, many of those articles that did specifically focus on positioning did not provide a specific definition of the concept. This lack of a definition provides further merit to our claim that a clear understanding of positioning is missing in the literature. In total, 354 articles that had a clear focus on positioning were selected for further analysis.

Two authors independently read the selected 354 articles to ensure that they met the inclusion criteria and to identify those that defined or conceptualized positioning. Those authors compared and discussed the results; in cases of disagreement, a third author was consulted. The final sample included 152 articles that provided at least one of the following: a clear definition, a conceptualization or an explicit referral to a specific definition or conceptualization of positioning.

3.3 Data analysis

To analyze the sample of articles, a combination of qualitative content analysis and quantitative analysis was used, which is a method for systematically and objectively evaluating texts (Lombard *et al.*, 2002). The analysis was conducted in three steps – classification, coding and text analysis – using qualitative text mining (Feldman and Sanger, 2007). Researchers often face the question of how to summarize text and determine what words and concepts are more significant than others. To go further than merely summarize, quantitative text analysis was used so that our review would be more than just descriptive statistics and qualitatively comparing and present definitions. Textmining, also known as text data mining or knowledge discovery from textual databases, refers to the process of extracting interesting and non-trivial patterns or knowledge from text documents (Feldman and Sanger, 2007; Witell *et al.*, 2016). The rationale for this process builds on social network theory, which describes linkages among social entities or nodes in a network and

the implications of these linkages and can be used on text to determine which words are significant (Xie, 2005; Witell *et al.*, 2016).

All selected articles were downloaded and definitions were captured in digital plain-text format. Each article was then coded according to several predetermined variables, such as context, definitions, approach and type of study (for example, empirical, conceptual) to describe the characteristics of the sample. The study analyzed the specific definition of positioning offered in each article; by “cleaning” the definitions from “positioning is defined as [...]” and focusing only on the words included in the actual definition of the concept. In addition, all common words such as “and” or “of” were removed. All text were stemmed, a procedure that involves reducing all words with the same stem to a common form (Lovins, 1968; Witell *et al.*, 2016). By using this method, the five key perspectives were identified in the pool of positioning definitions.

4. Analysis and results

This section begins by describing the year-wise and journal-wise distribution of the 47 identified journal articles. The section then describes the conceptualizations of positioning proposed by previous studies.

4.1 Journal-wise distribution of articles

This classification was done to observe where positioning research is being published. Articles related to positioning were found to be published in 33 reputed peer-reviewed journals in different time periods (Table 1). This number is encouraging for academicians concerned about identifying and selecting a channel for their positioning manuscripts. Among these reputed journals, the dominant outlet of positioning research have been the *Journal of Marketing*, *Journal of Product and Innovation Management* and *Business Horizon*.

4.2 Year-wise distribution of articles

Articles were classified based on their year of publication from 1969 to 2019 to identify the longitudinal pattern of academic research. Figure 2 shows that the emergence of publications on positioning started in 1969, followed by steady growth up until 1989. From 1990 onwards, it is clear from the figure that there is exponential growth till 2009. However, the trend line also indicates a decreasing pattern after 2010, which implies that the literature on positioning is decreasing. After 2010, only six papers were published, which is the lowest number of papers as compared to previous years. This concludes that there is a need for increasing concerns and interests on the positioning topic.

4.3 Conceptualization of positioning in the marketing discipline

To overcome ambiguity and disagreement resulting from insufficient theoretical development of the positioning concept, a systematic review of the literature was discussed. An extensive review of 152 studies published over a period of 48 years reflected in Appendix present a collection of positioning definitions from several well-known authors. The review indicates the following:

- Most of the authors have based their definitions on Ries and Trouts (1969) original description of positioning, i.e. they have made minor adjustments, but constructed their basic reasoning upon the words of Ries and Trout.
- There are many diverse interpretations of positioning as each author has preferred his/her own definition and has viewed positioning through different perspectives.

articles

Figure 2.
Number of
positioning
(definition) related
articles (1969–2017)

The various perspectives from which positioning are viewed by most of the authors are listed in [Table 2](#). It provides a description of each perspective, and denotes how many times each perspective is found in the pool of positioning definitions.

- Although these core perspectives all represent fundamental elements of the concept that delineates positioning, they were not all captured by every definition. Each perspective is discussed in turn.

4.3.1 P1 – Competition. The “Competition” (P1) perspective as already mentioned is found in 56 of the 152 (39%) definitions listed in [Appendix](#). This perspective underlies the idea that positioning helps in creating an image for the product in relative to separate or apart from competitors. The perspective (P1) is clearly articulated in several of the definitions, and in particular, that offered by [Kapferer \(2004\)](#), “Positioning means emphasizing the distinctive characteristics that make it different from its competitors and appealing to the public”. Similarly, [Kotler \(2003\)](#) defined “Positioning as an act of designing a company’s offering and image so that they occupy a meaningful and distinct competitive position in the target market’s minds”. Many others (including [Aaker and Shansby, 1982](#); [Belch and Belch, 1995](#); [Kotler and Anderson, 1996](#); [Lovelock et al., 2014](#); [McIntyre, 1975](#)) also included this perspective in their definitions.

4.3.2 P2 – Empty slot/mind. The perspective “Empty slot/Mind” (P2) captures the idea that the act of positioning seeks to find and fill an empty slot/window in the minds of the prospective buyers. P2 is evident in several definitions as listed in [Appendix](#). This perspective is also dominant as it was identified in 55 of the 152 (36%) positioning definitions. The “Empty slot/Mind” perspective is rooted in [Ries and Trout’s \(1969\)](#) seminal work on positioning and in particular, the popularity of the phrase “filling a slot in the minds of the target customers”. P2 is clearly asserted in several definitions, for instance, in [Crawford et al. \(1983\)](#) “Product positioning is the act of creating and altering product perceptions in customers’ minds”. Similarly, P2 is asserted in [Wright’s \(1997\)](#) definition stating “Positioning involves and owning a territory in the mind of the consumer it’s not just occupying the position, but owning it”, and in [Boone and Kurtz’s \(2009\)](#) definition stating “Positioning is placing at a certain point or location within a market in the minds of prospective buyers”.

S.no	Core perspective	Meaning	Frequency of occurrence
1	Competition	Creating an image for the product in relative to separate or apart from competitors	56
2	Empty slot/mind	Finding and filling an empty slot/window in the minds of the prospective buyers	55
3	Consumers perception	Establishing or evoking changes in consumers’ minds regarding offering	34
4	Differentiation	Creating a position which can be differentiated from the competitor	19
5	Competitive advantage	Gaining a competitive advantage by implementing a value creating strategy not simultaneously being implemented by any current or potential competitors	5

Table 2.
Core perspectives of positioning

4.3.3 P3 – consumers' perception. The perspective “Consumers' perception” (P3) captures the idea that the act of positioning seeks to purposefully establish or evoke changes in consumers' minds regarding offering. P3 is evident in several definitions as listed in [Appendix](#). This perspective was identified in 34 of the 152 (22 %) positioning definitions. P3 is clearly expressed in several of the definitions, and in particular, that offered by [Sengupta \(1990\)](#) “Positioning is the concept of perceptual space and consumers mind is regarded as a geometric perceptual space with product categories and brands occupying different points in that space”. Similarly, P3 is expressed in [Arnott \(1994\)](#) “Positioning is the deliberate, proactive, iterative process of defining, modifying and monitoring consumer perceptions of a marketable object”.

4.3.4 P4 – Differentiation. The “Differentiation” (P4) perspective is evidenced in 19 of the 152 (13%) positioning definitions as listed in [Appendix](#). This perspective captures the notion that creating meaningful differentiation in an offering represents a key aspect of the concept of positioning. P4 is clearly captured in [Myers \(1996\)](#) definition “Positioning refers to the problem of differentiating one's own product/service from other competing entries in the market place”. Likewise, [Zikmund and D'Amico \(1989\)](#) define “Positioning as a process to identify salient product characteristics that differentiate the brand from competitive brands”. P4 is consistent with the widely accepted view that differentiating an offering is a cornerstone to the positioning of a product, and therein, the success of the brand in the marketplace ([Wind, 1982; Bhat and Reddy, 1998; Hooley et al., 1998](#)).

4.3.5 P5 – Competitive advantage. The “Competitive advantage” perspective, is evident only in 5 of the 152 (3%) of the definitions. This perspective underlies the idea that positioning helps in gaining a competitive advantage by implementing a value creating strategy not simultaneously being implemented by any current or potential competitors. P5 is clearly articulated in several of the definitions as listed in [Appendix](#), and in particular, that offered by [Palmer \(1994\)](#) “Positioning is an attempt by the organization to distinguish its offerings from those of its competitors in order to give it a competitive advantage within the market”. [Hooley et al. \(1998\)](#) also articulated the same in their definition, “Positioning is the act of designing the company's offering and image so that they occupy a meaningful and distinct competitive advantage”. P6 is consistent with the widely accepted view that a well-positioned brand enhances the overall competitiveness of the brand and generates a sustainable competitive advantage for the firm [Aaker and McLoughlin \(2007\)](#), [Blankson et al. \(2013\)](#), [Ghodeswar \(2008\)](#), [Hooley et al. \(2012\)](#), [Kotler \(2003\)](#), [Porter \(1996\)](#). Accepting the view that competitive advantage represents the cornerstone of the positioning concept, the researcher found it surprising that only five definitions from the pool captured this perspective.

Based on (1) the core perspectives as discussed in the foregoing Section (2) the recognized need for an universally-accepted definition of positioning (3) the inconsistencies of the core meaning of the positioning construct and the researcher's conviction that marketing research begins with a clear underlying meaning of the phenomenon in question, following definition of positioning encompassing the five underlying positioning perspectives is suggested:

Positioning is a strategy of finding the desired consumer perception of product/brand and filling an empty slot/window in the minds of the target customers by creating and communicating an image which differentiates its unique position from competitor to gain a competitive advantage in the market.

5. Research implications

On the theoretical front, this review makes multiple contributions. First, the study presents a comprehensive systematic review of 152 identified articles in the marketing discipline to reveal how researchers have explored this concept so far and presents a route for future research. Second, this review makes a contribution to understanding what positioning is. Specifically, this research contributes by identifying the key perspectives in definitions of positioning. Gaining insights from existing conceptualizations of the construct and supporting that by the theoretical foundations, a concise definition, broad in scope and perspective, has been derived, the suggested definition will provide clearer comprehension of the concept of positioning and a base on which to advance empirical research on positioning. Third, by providing the distribution schema of customer engagement articles based on different criteria, this study is believed to serve as a valuable tool for researchers to understand the current scenario of positioning research in the marketing discipline and aid in moving the field forward. On the practical front, this study exhibits the favorable outcomes organizations can derive by having a proper definition of positioning. Developing and implementing an organization's positioning is seen as a crucial element of an organization's strategic orientation to markets. The more an organization knows about positioning, the better adept it will be to enact so. Therefore, understanding positioning is imperative in that regard; this review will help organizations comprehend that better. Further, understanding how various perspectives are connected with positioning will help managers to design and implement positioning strategies for their products/brands and allow organizations to gain competitive advantage.

6. Conclusion and limitations

The goal of this systematic review was to review state-of-the-art literature on product/brand positioning to re-examine the positioning concept and developing a more comprehensive definition from a theoretical viewpoint. Positioning has been defined in several nuanced ways. This fragmentation can be misleading, and a systematic review can provide a useful analysis to highlight the fragmentation and propose boundaries to better define positioning. However, a systematic review also has its own methodological limitations, including the level of precision. To tackle this limitation, we started broadly and then focused on specific databases and research terms. Although some dimensions might have been missed, we believe our conclusions obtained a reasonable level of redundancy in the databases that we used for this study. We also wanted to contribute to the literature and hope that further research on this important strategic concept will refine and clarify our results. This systematic review presented the results of an analysis and synthesis of the broader positioning literature. A review of 152 published positioning studies from the literatures identified the various perspectives from which positioning are viewed by most of the authors. The five most frequently identified perspectives were competition, empty slot/mind, consumers' perception, differentiation and competitive advantage. Importantly, the findings of this review confirm that despite the relatively established body of literature, there is a lack of coherent definition for positioning, and there is no mutual agreement among marketing scholars and practitioners about the exact meaning of the concept.
